DE DATA DASHBOARD

WHERE WE ARE HEADED

Our Home Visitors work hard to collect this data, offer referrals, and provide resources on every visit to improve the health of Delaware families! We look forward to building on these successes while addressing continuous quality improvement (CQI) in the areas of breastfeeding initiation, tobacco cessation referrals, and safe-sleep education.

94.4% of newly enrolled primary caregivers were **screened for intimate partner violence.**

86.8% of children were in a household in which a family member **read, told stories, and/or sang songs with the child** most days during a typical week.

88.1% of newly enrolled mothers received a **depression screening.**

82.2% of children received a **developmental screening** at the age-appropriate time interval.

57% of infants 6 to 12 months of age (who had been enrolled in home visiting for at least six months) were **breastfed.**

81.5% prenatally enrolled mothers received a **postpartum care visit** within three months of delivery.

18.5% of primary caregivers using tobacco or cigarettes at enrollment (and had been enrolled for at least three months) were referred to **tobacco cessation** counseling or services within three months of enrollment.

73% of infants under 12 months of age were always put to **sleep safely. We've made tremendous improvements here.**
